# 프로그래밍 언어 응용

정기 수행 평가 02

1 라이브러리 설정

- connector lib 적용

2 프로그램 구성

- SQL 생성

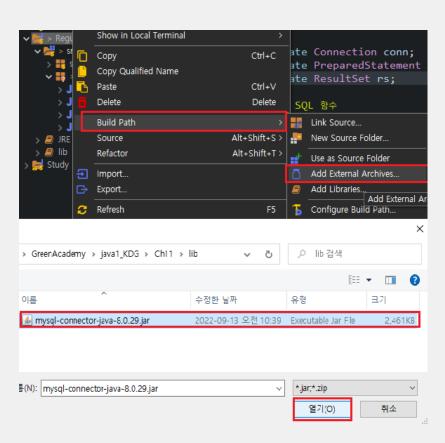

- User 생성

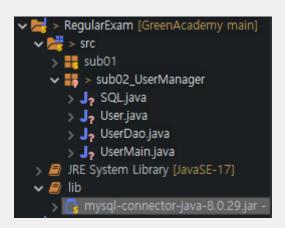

- UserDao 생성

- UserMain 생성

**3** 실행 화면

#### 라이브러리 설정 connector lib 적용

라이브러리 추가 확인

SQL 구문을 담은 클래스 생성

PreparedStatement을 이용하는 구문 저장

```
package sub02_UserManager;

public class SQL {
   public static final String INSERT_USER = "INSERT INTO `User3` VALUES(?,?,?,?);";
   public static final String SELECT_USERS = "SELECT * FROM `User3`;";
   public static final String SELECT_USER = "SELECT * FROM `User3` WHERE `name`=?;";
   public static final String DELETE_USER = "DELETE FROM `User3` WHERE `uid`=?;";
}
```

## **2** 프로그램 구성 User 생성

```
package sub02 UserManager;
  public class User {
       private String uid;
       private String name;
       private String hp;
       private int age;
       //get set
100
       public String getUid() {[]
130
       public void setUid(String uid) {[]
160
       public String getName() {[]
190
       public void setName(String name) {[]
220
       public String getHp() {□
250
       public void setHp(String hp) {[]
280
       public int getAge() {[]
310
       public void setAge(int age) {
34
35
36©
       //get set-end
       @Override
37
       public String toString() {
38
           return uid + "," + name + "," + hp + "," + age;
39
40
41
```

가져온 데이터를 담을 User 클래스 생성 멤버 접근을 위한 Getter, Setter와

정보 표시를 위한 toString메서드 Overriding

```
1 package sub02 UserManager;
 30 import java.sql.Connection;
 4 import java.sql.DriverManager;
 5 import java.sql.PreparedStatement;
 6 import java.sql.ResultSet;
 7 import java.sql.SQLException;
 8 import java.sql.SQLIntegrityConstraintViolationException;
 9 import java.util.ArrayList;
10 import java.util.List;
12 public class UserDao {
       //싱글톤
13
       private static UserDao instance = new UserDao();
       public static UserDao getInstance() {
16
           return instance;
17
18
       private UserDao() {}
19
20
       //DB정보
21
       String host = "jdbc:mysql://127.0.0.1:3306/java1db";
22
       private String user = "root";
23
       private String pass= "1234";
24
250
       private Connection getConnection() throws ClassNotFoundException, SQLException{
26
           Class.forName("com.mysql.cj.jdbc.Driver");
27
           Connection conn = DriverManager.getConnection(host,user,pass);
28
           return conn;
29
30
31
       private Connection conn;
32
       private PreparedStatement psmt;
       private ResultSet rs;
```

실질적으로 SQL 구문을 전달하는 UserDao 클래스 생성

싱글톤 객체로 생성

DB연결을 위한 getConnection 함수 정의

SQL 구문에 쓰일 멤버 변수들 정의

```
/DB SQL 함수
//insertUser
public void insertUser(User user) {
    try {
        conn = getConnection();
        psmt = conn.prepareStatement(SQL.INSERT USER);
        psmt.setString(1, user.getUid());
        psmt.setString(2, user.getName());
        psmt.setString(3, user.getHp());
        psmt.setInt(4, user.getAge());
        psmt.executeUpdate();
        close();
    } catch (SQLIntegrityConstraintViolationException e) {
        System.out.println("아이디 또는 휴대폰 중복입니다.");
    } catch (ClassNotFoundException e) {
        e.printStackTrace();
    } catch (SQLException e) {
        e.printStackTrace();
    insertUser-end
```

```
//selectUsers
public List<User> selectUsers(){
    List(User> users = new ArrayList(>();
    try {
        conn = getConnection();
        psmt = conn.prepareStatement(SQL.SELECT USERS);
        rs = psmt.executeQuery();
        while(rs.next()) {
            User user = new User();
            user.setUid(rs.getString(1));
            user.setName(rs.getString(2));
            user.setHp(rs.getString(3));
            user.setAge(rs.getInt(4));
            users.add(user);
        close();
    } catch (Exception e) {
        e.printStackTrace();
    return users;
  selectUsers-end
```

```
//selectUser
    public User selectUser(String name){
        User user = new User();
        try {
            conn = getConnection();
            psmt = conn.prepareStatement(SQL.SELECT USER);
            psmt.setString(1, name);
            rs = psmt.executeQuery();
